

Dr. Beatrice Leung

D.D.S., M.P.H, Cert. Pros., Dip A.B.P., F.A.C.P., F.R.C.D (C).

Dr. Leung received her DDS degree at the University of Toronto. She completed a GPR at the Boston Medical Center and a Prosthodontics Residency at the University of Pittsburgh. During that time, she also earned a MPH degree. Following these programs, she became a Fellow of the Royal College of Dentists of Canada and a Diplomate of the American Board of Prosthodontics. She has been in private practice since graduation. Currently she serves as a part time Assistant Professor at the University of Toronto involved in the undergraduate prosthodontic education. She has been named an Honorary Class Member for three years and a recipient of the 2019-2020 Dr. Bruce Hord Master Teacher Award.

Learning Objectives

Tips and Tricks in Inserting Implant Supported Restorations

This presentation will highlight common clinical challenges that general dentists face in inserting implant supported restorations. Practical solutions will be provided in troubleshooting these challenges in an effort to improve the delivery phase of implant dentistry for general dentists.

Typical scenarios to be covered include:

- 1) How to adjust proximal contacts for implant crowns
- 2) How to deal with soft tissue interference during the insertion of implant crowns
- 3) How to minimize the risk of screw loosening or stripped screws
